

World Rabies Day: Countdown to 2030 #rabieschat
Hosted by HealthforAnimals

When: Thursday, September 28, 10am EST/4pm CET/5 PM EAT

Duration: One hour

Where: Online

Rabies continues to kill an estimated 60,000 people worldwide every year despite being 100 per cent preventable through a simple, inexpensive canine vaccine. Giving this protection to just 70 per cent of dogs is enough to create “herd immunity” and stop dog-transmitted rabies.

On World Rabies Day, join our panel of international experts on Twitter as we discuss progress towards ending human deaths from rabies by 2030.

Taking your questions will be:

- **Carel du Marchie Sarvaas**, Executive Director, [HealthforAnimals](#) @Health4Animals
- **Louise Taylor**, Scientific Director, [Global Alliance for Rabies Control](#) @RabiesAlliance
- **Dr Sergio Recuenco-Cabrera**, 2016 World Rabies Day award winner @srecuenco
- **Luke Gamble**, CEO, [Mission Rabies](#) @LukeGamble
- **Felix Lankester**, project leader, [Afya Serengeti](#) @felixlankester
- **Kenneth Wameyo**, honorary secretary, [Kenya Veterinary Association](#) @wameyokw

Hear from experts about:

- The current problem of rabies around the world;
- Success stories from canine vaccination programs;
- The benefits of knowledge-sharing across regions;
- The progress in ending human deaths from rabies by 2030.

To take part, simply tweet your questions using #rabieschat, and be sure to follow the hashtag for the live discussion. Follow @Health4Animals for more.

Join the conversation and let's help reduce the number of deaths from rabies to zero by 2030!
